PROFILE SUMMARY

Computer Science Engineering student at Anurag University, graduating in 2027, focused on building reliable and scalable software solutions. Hands-on experience with Python, Java, JavaScript, REST APIs, SQL/NoSQL databases, AI/LLM integration, and software testing. Delivered measurable results including 20% lower API latency and 30% faster data retrieval, with a Top 10 finish among 100+ teams at a national hackathon.

EDUCATION

B.Tech – Computer Science Engineering

Anurag University

CGPA: 8.52

Expected July 2027

Hyderabad

PROJECTS

TerraPulse – Crop & Weather Monitoring Platform

Python, REST APIs, MySQL

- Engineered a normalized MySQL database schema and applied parameterized queries; **integrated 3 external REST APIs** and reduced average response latency by **20%** using request-level caching.
- Developed unit tests for the data-ingestion pipeline, identifying **2 timestamp-parsing defects** before dashboard integration.
- Refactored the application into a layered architecture covering data **fetching, parsing, storage, and serving**.

Grant Agent System – Multi-Agent AI Application

Python, CrewAI, Google Gemini API, SQLite, Streamlit

- Architected a 4-agent AI workflow** consisting of Drafter, Planner, Evaluator, and Refiner agents with explicit interfaces for independent development, testing, and replacement.
- Engineered a deterministic validation layer around 2 API calls per paper**, improving output reproducibility and maintaining predictable API usage.
- Developed **15 unit tests** for the data-ingestion pipeline, identifying **2 timestamp-parsing defects** before dashboard integration.

Reconnect – Alumni Networking Platform (In Progress)

Next.js, React, JavaScript, Firebase, Firestore

- Developing an **alumni networking platform** focused on user profiles, alumni discovery, and structured mentorship workflows.
- Architected an 8-collection Firestore database** covering alumni profiles, users, mentorship requests, mentorship meetings, conversations, engagement logs, events, and opportunities.
- Implemented Next.js API routes** for user data retrieval and mentorship request workflows.
- Configured **Firebase Authentication and Firestore security rules** to manage access to application data.

HACKATHONS & LEADERSHIP

National Hackathons – Anurag University | 2023 – Present

- Achieved **Top 10** at the Techxcelerate Hackathon (CodeBeats) among 100+ teams, leading end-to-end development and delivery of an AI-driven application within **24 hours** and competed in **4 national-level hackathons**, delivering functional applications under tight deadlines.
- Applied architectural optimizations across competition projects that achieved **30% faster data retrieval** and **30% lower bandwidth consumption**.

TECHNICAL SKILLS

Languages

Python, Java, C, C++, JavaScript

Databases

MySQL, MongoDB, Cloud Firestore

Dev Tools

Git, GitHub, VS Code, Postman, Linux, Vercel

Backend & APIs

REST API Design & Integration, Firebase

CS Fundamentals

Data Structures & Algorithms, OOP, DBMS, Computer Networks

AI & LLMs

Prompt Engineering, LLM API Integration, CrewAI, Streamlit
